

IF IT MOVES **WE TRACK IT**

FOR BETTER PROTECTION

FOR BETTER PROFITS

Taxi Tracking Specialists Since 1994

WE CELEBRATE FREEDOM

Of Movement

We know that the owners and operators of mini-bus taxis are the people who provide South Africans from all walks of life with vital 'public' transport every day. We are here to protect the vehicles and the profitable use of mini-bus taxis so that the businesses who provide 'freedom of movement' are secured and safe.

We understand how to use innovative technology to monitor when and when your vehicle is being used – or not being used so that mini-bus taxi owners can be sure their taxi-driver is making their business work properly; that the taxi is on the route it should be; in service when it should be and we protect your vehicle through constant monitoring Altrack has more than two decades of experience as South Africa's favoured specialists in vehicle protection and fleet management services to the mini-bus taxi industry.

The Altrack unit is a GSM / GPRS / GPS module and service that tracks and monitors your vehicles – live in real-time for pinpoint positioning to ensure:

OPERATIONAL EFFICIENCY
OF YOUR VEHICLE

COST EFFECTIVE
PRODUCTIVITY OF
DRIVERS

EASY RECOVERY IN THE
EVENT OF THEFT

OVERALL MAINTENANCE
OF YOUR VEHICLE FLEET
THROUGH BETTER
DRIVING.

WE MONITOR AND MANAGE

**so that you can carry on
running your business!**

We are driven to provide you with information by monitoring your vehicle and the mini-bus driver's performance so that you can maintain control over the use and productivity of your vehicle. Besides knowing your vehicle is under our watchful eye in case of theft – Altech is about more than protection. We're about monitoring usage and providing information about what your taxi is doing, when, when and whenever.

It's about knowledge that leads to cost savings – and monitoring of your vehicle so that you can ensure it is better looked after so your key asset has more longevity and costs you less. Our services go beyond vehicle tracking and recovery, because we can help prevent misuse of your vehicle or fleet of taxis, information can help you reduce cost per kilometre and keep driver's in check because they know they are under constant monitoring which less likelihood of driver delinquency – and over all that means your business improves under the watchful eye of Altrack.

- 
- Ground and air recovery teams for free vehicle recovery – working nationally and internationally, we have a highly trained recovery personnel who will respond immediately to secure and recovery stolen vehicles; co-ordinating and liaising with the South African Police Service (SAPS) and communicating with you so you know we are on constant alert.
 - Battery back-up - our system is powered by the vehicle's battery but in the case of criminals disconnecting the vehicle battery, the system has a back-up battery that provides power for more than eight hours, enabling it to transmit a signal, providing ample time for recovery.
 - Unit Health Testing - is done automatically every 48 hours, by Altrack.
 - Track your vehicle & get detailed trip history reports via the internet –because our GSM/GPS products provide an accurate vehicle location through online interaction that is real time.

FIT IT IN A FLASH

Get it fitted at our fitment centres in
